Product Return Request — AWS Deployment Test Cases

MIS 3371 | Section 26252 | Group 3

Deployed frontend URL	https://staging.d1sg7ta5nv9m14.amplifyapp.com
API Gateway endpoint	https://iqpj8rd7ff.execute-api.us-east-1.amazonaws.com/api/returns
Lambda function	MIS3371-ReturnRequest (Node.js, execution role: LabRole)
Test cases below assume	today's date = 2026-10-31. If testing on a different day, shift each Purchase Date by the same number of days before today.

Business rules under test: **BR-1** a return must be requested within 30 days of the purchase date; **BR-2** final-sale/clearance items are not eligible for return; **BR-3** the quantity returned cannot exceed the original quantity purchased; **BR-4** a defective item valued over $200 requires supervisor approval (exactly $200 does not).

How to run each case

Open the deployed URL above. For each row, enter the listed values into the form (Customer ID / Order Number / SKU can be any text — only the fields below affect the outcome), submit, and compare the message shown under the Submit button to the Expected Outcome column. **Qty** is quantity to return / original quantity purchased.

Test Cases

#	Type	Qty	Purchase Date	Reason	Price	Final Sale	Expected Outcome
1	Valid	1 / 2	2026-10-21	No Longer Needed	$50	No	Approved.
2	Valid	1 / 1	2026-10-14	Defective	$250	No	Approved, pending supervisor review (defective item over $200).
3	Invalid (BR-1)	1 / 1	2026-09-16	Wrong Item	$40	No	Rejected: Return request is outside the 30-day return window.
4	Invalid (BR-2)	1 / 1	2026-10-25	No Longer Needed	$30	Yes	Rejected: Final-sale and clearance items are not eligible for return.
5	Invalid (BR-3)	3 / 2	2026-10-23	Other	$60	No	Rejected: Return quantity exceeds the original quantity purchased.
6	Boundary (30-day window)	1 / 1	2026-10-01	Other	$75	No	Approved. (Exactly 30 days is still inside the window.)
7	Boundary ($200 threshold)	1 / 1	2026-10-28	Defective	$200	No	Approved. (Exactly $200 does not require supervisor review; only strictly over $200 does.)

Notes

All seven cases were executed against the live deployed URL on 2026-10-31 and returned the Expected Outcome shown above. Cases 2 and 7 exercise the supervisor-approval rule (BR-4), and case 4 exercises the final-sale rule (BR-2) — both are enforced only by the backend (AWS Lambda) and are not checked client-side before submission reaches the server, confirming the deployed frontend is actually communicating with the Lambda backend through API Gateway rather than deciding the outcome locally.
